

Enrichment Procedures

Purpose:

To give students who have special abilities the opportunity to reach their full potential by nurturing their talents

Scope:

This procedure applies to students identified as gifted and talented, as well as all teaching staff.

Responsibilities:

All school staff, including teacher aides
Parents
Resource personnel

Guidelines:

The school will follow the inclusive principle ensuring all learners with special education needs are engaged and achieving through being present, participating and learning.

A variety of ways will be used to identify children with special abilities. These will include observations by teachers and parents, standardised tests such as STAR, eASttle; PAT, records of school work, and reports by educational experts

The school will recognise that special abilities may be manifested in different ways. It will further recognise that some talents become evident early in the child's life while others emerge as the child grows older.

Teachers will address the needs of these children within the regular class activities. However, where appropriate and possible, a specialised enrichment programme may be provided periodically by teachers, teacher aides, parents or external experts as resources permit.

The teachers will include in their teaching programmes activities that foster creativity, social development, problem-solving ability and divergent thinking that will be of particular value to these children.

The school will make provisions for continuing staff development in this area and acquire suitable teaching and learning resources, particularly eLearning.

Parents will be encouraged to share the responsibility for extending the experiences and learning opportunities of the children with special abilities.

Teachers will endeavour to provide enriching activities through the use of eLearning, particularly with home and school communications and the school website.

Teachers will endeavour to develop enriching and vibrant programmes by encouraging student evaluation and improvement of programmes, as well as offer students the opportunity to plan and organise some of their own learning experiences.

Comments and data will be added to eTap (School Management System) at the end of a teaching period (as identified by class teacher-usually one term). Post-data, recommendations and achievements will be recorded. Time allocation and duration of support will be dependent on teacher/aide availability, class programme, enjoyment and the progress achieved.
